Built a dynamic career as an AWS Certified DevOps Engineer with 4 years of expertise in cloud architecture, CI/CD automation, container orchestration, and Infrastructure as Code, driving scalable, secure, and resilient cloud-native solutions across production environments.

Education

2019: Bachelor of Technology (Computer science & Engineering) from Raja Balwant Singh Engineering and Technical Campus , Agra

Core Competencies

- Cloud Infrastructure Management
- Continuous Integration and Deployment
- Container Orchestration Strategies
- Security Best Practices
- Performance Monitoring Techniques
- Agile Development Methodologies
- Infrastructure Automation
- Technical Account Management
- Cross-Functional Collaboration

Soft Skills

Analytical

Collaborator

Communicator

Decisive

Critical-Thinker

Profile Summary

- A result-oriented AWS Certified Solutions Architect – Associate and DevOps Engineer with 4 years of experience in cloud infrastructure engineering, CI/CD automation, and container orchestration, demonstrating a consistent track record of enhancing system reliability, deployment efficiency, and operational performance.
- Contributed to the design and optimization of AWS cloud environments, implementing best practices in automation, security, and scalability to ensure highly available and resilient production systems.
- Built and maintained end-to-end CI/CD pipelines using Jenkins and Git-based workflows, accelerating deployment cycles and improving release consistency across environments.
- Developed strong expertise in containerization and orchestration using Docker and Kubernetes, enabling scalable microservices deployments aligned with modern cloud-native principles.
- Implemented Infrastructure as Code (IaC) using Terraform to provision and manage cloud resources efficiently, reducing manual intervention and improving infrastructure consistency.
- Strengthened monitoring and observability practices using logging and performance tracking tools, proactively identifying bottlenecks and minimizing downtime through structured incident response processes.
- Applied SRE principles to improve system stability, optimize resource utilization, and enhance overall application performance in production environments.
- Collaborated effectively with development, QA, and operations teams within Agile frameworks to deliver secure, scalable, and high-performing cloud solutions.

Work Experience

TechnoData Analytics Pvt Ltd

Oct 2022 to July 2025
DevOps Engineer
Key Result Areas

- Designed and deployed AWS infrastructure components including EC2, S3, IAM, VPC, RDS, and Load Balancers based on project requirements.
- Spearheading the design and implementation of robust infrastructure solutions utilizing Amazon Web Services (AWS), ensuring optimal performance and reliability tailored to client needs.
- Streamlining cloud infrastructure costs through strategic resource management, including auto-scaling and instance optimization, to achieve significant financial savings without compromising service quality.
- Implemented Infrastructure as Code using Terraform / AWS CloudFormation to automate provisioning and maintain consistency across environments.
- Created and managed CI/CD pipelines using tools like Jenkins / GitHub Actions to automate build, test, and deployment processes.
- Worked on containerization using Docker and deployed applications on Kubernetes / Amazon EKS clusters.

Technical Skills

- **Operating Systems:** Linux (Ubuntu), Windows
- **CI/CD Tools:** Jenkins, GitHub Actions, AWS Code pipeline
- **Version Control:** Git, GitHub
- **Cloud Platforms:** AWS (EC2, S3, RDS, VPC, Lambda, CloudFormation, CloudWatch, IAM, EKS, Fargate, ALB, Auto Scaling, Route 53),
- **Containerization:** Docker, ECS, Docker Compose
- **Orchestration:** Kubernetes (EKS)
- **Defect Tracking:** JIRA
- **Infrastructure as Code (IaC):** Terraform, AWS CloudFormation
- **Monitoring & Logging:** Prometheus, Grafana, AWS CloudWatch,
- **Database Technologies:** PostgreSQL, MySQL, Redis, Amazon RDS,
- **Security:** AWS IAM, KMS, AWS WAF, SSL/TLS
- **Networking:** VPC, Subnets, VPN, Route 53, Network ACLs, Load Balancers (ALB, NLB), Transit Gateway
- **Version Control Hosting:** GitHub
- **Load Balancing & Networking:** ELB, Nginx

Personal Details

Date of Birth: 22 May 1997

Languages: English & Hindi

Address: Bangalore Urban - Karnataka

- Configured IAM roles, policies, security groups, and network ACLs to enforce secure access control following least privilege principles.
- Set up monitoring and logging solutions using AWS CloudWatch and integrated alerts for proactive issue detection.
- Collaborated with development and QA teams to resolve deployment issues and improve release cycles.
- Performed basic cost optimization activities such as right-sizing EC2 instances and removing unused resources.
- Assisted in implementing DevSecOps practices by integrating security scanning tools into CI/CD pipelines.
- Participated in client meetings and technical discussions to understand infrastructure and deployment requirements.
- Partnering with cross-functional teams to implement DevOps practices, embedding security checks into the CI/CD pipeline for early vulnerability detection.
- Establishing CI/CD best practices, incorporating pipeline-as-code, automated testing, and blue-green deployments to minimize deployment risks and enhance rollback capabilities.
- Ensuring compliance and audit readiness by meticulously documenting system configurations, changes, and access control protocols.

Bullseye Outsourcing Services Pvt. Ltd.
Oct 2021 to Oct 2022
Software Developer
Key Result Areas

- Designed and developed scalable web applications using modern programming frameworks and best coding practices.
- Collaborated with cross-functional teams (QA, DevOps, Product) to deliver high-quality software within defined timelines.
- Integrated RESTful APIs and third-party services to enhance application functionality and user experience.
- Participated in code reviews, debugging, and performance optimization to improve application stability and efficiency.
- Managed application deployments in staging and production environments, ensuring smooth release cycles.
- Worked with version control systems like Git for source code management and branch strategy implementation.
- Contributed to CI/CD pipeline processes by supporting build, testing, and deployment automation.
- Assisted in deploying applications on AWS services such as EC2, S3, RDS, and IAM.
- Implemented basic logging and monitoring practices to identify and resolve production issues.
- Collaborated in requirement gathering and technical discussions to translate business needs into technical solutions.

Certification

- AWS Certified Solutions Architect – Associate in 2026
